BOTANY

(Honours Core)

Paper : BOT-HC-5026

(Plant Physiology)

Full Marks : 60

Time : Three hours

***The figures in the margin indicate
full marks for the questions.***

1. Answer the following questions : $1 \times 7 = 7$
- (a) _____ is a constituent element of chlorophyll.
 - (b) Aquaporins are _____.
 - (c) _____ is a necessary component of nitrogenase enzyme in plants.
 - (d) Chemically kinetin is known as _____.
 - (e) Phototropins are _____ protein.

Contd.

(f) Many microbial species produce water soluble pigments that serve as chelating agents, termed as _____.

(g) In proton pump _____ enzyme is involved.

2. Answer the following questions : $2 \times 4 = 8$

(a) Differentiate between apoplast and symplast.

(b) Differentiate between chlorosis and etiolation.

(c) Write the differences between Pr and Pfr forms of phytochrome.

(d) What are ABC transporters ? Mention their role in solute transport.

3. Write briefly on **any three** of the following : $5 \times 3 = 15$

(a) Jasmonic acid

(b) Phototropins

(c) Pressure potential

(d) Role of ABA in environmental stress

(e) Donnan equilibrium

4. Answer the following questions : (**any three**) $10 \times 3 = 30$

(a) What are gibberellins ? Describe the physiological effects of gibberellins. $2 + 8 = 10$

(b) Describe the structure and function of cryptochrome.

(c) Describe the active and passive absorption of water by roots in plants.

(d) What is florigen concept ? Describe its role in stimulating flowering in different types of photoperiod sensitive plants. $4 + 6 = 10$

(e) Describe the starch-sugar hypothesis and K^+ pump theory of stomatal movement. $5 + 5 = 10$

(f) What is seed dormancy ? Mention different types of seed dormancy. Describe the causes and mechanisms of breaking of seed dormancy. $1 + 2 + 7 = 10$
